

# Humanities x “Science” → Innovation

Lui LAM (林磊)

*San Jose State University, San Jose, California*

The talk’s title is first explained. It involves the correct definition of Science, why there are quotation marks, and the proper relationships between the humanities and science. And why and how when the two are synthesized or merged it will promote and even lead to innovation—something China recognizes she needs urgently. We then explain why innovations are so hard to come by in present China. To overcome that, “The 333 on China’s road to innovation” is presented, viz., three kinds of successful approach in innovation in science history, three obstructive “mountains”, and three solutions.

**Lui LAM**, humanist and physicist, is professor at San Jose State University, California, and guest professor at Chinese Academy of Sciences and China Association for Science and Technology. Education: BS (First Class Honors), University of Hong Kong; MS, University of British Columbia; PhD, Columbia University. Worked in USA, Europe (Belgium, West Germany), China (Inst. of Physics, CAS, Beijing, 1978-1983). Invented Bowlics (1982), Active Walks (1992) and two new disciplines: Histophysics (2002) and Scimat (Science Matters, 2007/2008). Published over 180 papers and 16 books, including *Arts* (2011) and *All About Science* (2014). Founder of International Liquid Crystal Society (1990); founder and editor of two book series: Science Matters (World Scientific) and Partially Ordered Systems (Springer). Current research: philosophy and complex systems.
